CPI32B1	Information	00	19/01/09	21:06:15.755152	QDBRMVCT	QSYS	2B3A	QDBDLTFI	QSYS	06EA
					Message : Constraint was removed. Cause : Constraint QRECOVERY_QADBERAP_PRIMARY_KEY_____ was removed from file QADBERAP in library QRECOVERY for TYPE value *ALL, RMVCST value *RESTRICT. The parent file was *N in library *N.					
CPC32B1	Completion	00	19/01/09	21:06:15.830320	QDBRMVCT	QSYS	2B3A	QDBDLTFI	QSYS	06EA
					Message : 1 constraint{s} removed from file QADBERAP. Cause : File QADBERAP in library QRECOVERY had 1 of 1 constraints removed. See previous messages for the names of the constraints removed. If a constraint was changed to the defined state and message CPI32B6 was sent, the number of constraints removed will include these constraints even though they were not removed. See previous messages for the reason why constraints were not removed.					
SQL7905	Information	20	19/01/09	21:06:23.910736	QSQCRTT	QSYS	*STMT	QSQCRTT	QSYS	*STMT
					From module : QSQCRTT From procedure : CLEANUP Statement : 24586 To module : QSQCRTT To procedure : CLEANUP Statement : 24586 Message : Table QADBERAP in QRECOVERY created but was not journaled. Cause : The table QADBERAP was created in QRECOVERY, but the table was not journaled. Either a QDFTJRN data area indicated that journaling should not be started, the default journal did not exist, or the default journal did exist but the journaling could not be started. The default journal may be damaged, unable to accept journal entries, or may not exist. The SQL name for the table is QADBERAP and the system name for the table is QADBERAP. For a distributed table, journaling could not be started on all of the systems. The default journal must exist, and be able to accept journal entries, on each of the systems in the node group. Recovery . . . : The table was created, but until the table is journaled, COMMIT{*CHG}, COMMIT{*CS}, COMMIT{*RS}, COMMIT{*RR}, COMMIT{*UR}, and COMMIT{*ALL} will not be allowed for table QADBERAP. If the default journal does not exist, create the journal {CRTJRN command} and start journaling {STRJRNPF command}. If the journal is in error, correct the problem to the journal. If the table is distributed, correct the problems on all the systems in the node group and start journaling {STRJRNPF command}.
