					Message : Shadow controller job was not started. Cause : There are no supplier or collector systems defined for directory shadowing on your system. Therefore the shadow controller job QDIRSHDCTL did not start. Recovery : To have directory shadowing active on your system, use the Work with Directory Shadowing {WRKDIRSHD} command to add supplier or collector systems. Then run the Start Directory Shadow {STRDIRSHD} command again to start the shadow controller job. Technical description : The shadow controller job controls when supplier systems start supplying data to your system and also does cleanup of directory files after a collector system has collected data from your system.
